# LED-RGB-MOD Installation Instructions

**Ground Input**- Connect to chassis ground.

**Ignition Input**- Connect to 12 volt Ignition (switched power when key is on). It is recommended to fuse the power wire were connection is made to vehicle.

Tape Driver is capable of running 8 rolls of RGB tape (128ft)

**\*\*GTW Input** – LED tape will “Go To White” (coach light feature) when there is a positive or negative input trigger (selectable with dip switch on side of tape driver).

**\*\*DMX Input**- N/A for current model.

**\*\*Index Input** – LED tape will change sequences with each ON/OFF toggle of 12 volt power. Compatible with Limo Touch

**\*\*Sync Input**- N/A for current model.

**\*\*Dimming Input** – LED tape will dim with each ON/OFF toggle of 12 volt power. Compatible with Limo Touch ON/OFF input.

**\*\*All inputs are designed to trigger with a 12volt positive input. Every time the input is triggered ON and OFF (i.e. using a toggle switch) the Tape driver will change its function. Any basic toggle switch can be used for these functions.**
